GBIF in one slide

- Inter-governmental organization
- Mission: "To facilitate free and open access to biodiversity data worldwide, via the Internet, to underpin scientific research, conservation and sustainable development."
- 429.391.316 data records
- 14,632 datasets
- Since 2001

GBIF: an intergovernmental initiative to share biodiversity information

Currently 52 countries; 36 International Organisations...

Everything - Showing data from no date to 2020 (362725628 records)

Taxonomic characteristics

The following provides a summary of number of records per kingdom. Further filters, such as a location or temporal filter applied will [exploring the data](#).

286,515,884 (66.8861%) Animalia records	121,523,887 (28.3653%) Plantae records	8,038,407 (1.8765%) Fungi records	4,332,760 (1.0115%) Protozoa records
2,107,154 (0.4919%) Chromista records	1,007,975 (0.2353%) Bacteria records	840,131 (0.1961%) Other records	14,228 (0.0033%) Archaea records
7,796 (0.0018%) Viruses records			

Record type characteristics

Records may originate from a variety of means, such as a scientist collecting a specimen or an individual recording the animal. This is classified by the [Darwin Core bas & O Record](#) standard.

303,738,491 (70.907%) Observation records	89,465,185 (20.885%) Specimen records	31,381,460 (7.325%) Unknown evidence records	2,615,217 (0.611%) Fossil records
762,123 (0.178%) Using Specimen records	401,613 (0.094%) Literature Occurrence records		

- free and open data under a common standard

GBIF is more than a “Data source”, it is an infrastructure

- Physical infrastructure
 - Physical infrastructure, cyberinfrastructure (portals, IT tools), human resources, and expertise, and program management and coordination.
- Information infrastructure
 - Data workflows
 - Datasets
 - Data openness
 - Data products
- Capability infrastructure
 - Knowledge base and management, training
 - Standard development
 - Data gateways development

Resources <> e-Infrastructure <> Composition <> Services

Information infrastructure

Data workflows

Data acquisition

- Field sampling
- Digitalization
 - collections
 - literature
- Other sources
(citizen science, IAs,...)

GBIF is data from everyone to everyone ... this includes LTER and other observatory-based data

Data processing

- Protocols
- Standards
- QA/QC
- Documentation/Metadata

Mandatory Terms (must be included)	
Occurrence Data	
• occurrenceID :	Acts like a Globally Unique Identifier (GUID). If you do not have a GUID field, you can concatenate the values for
• institutionCode	
• collectionCode	
• catalogNumber	
• scientificName	

Datasets

- Publication
- Archival
- Usage

Avoid duplication > first, knowing what we know,...

Culture change > data for the immediate ends, also to be reusable

Capability infrastructure

- Knowledge base and management, training workshops, manuals e-Learning, repositories
- Standard development
 - Darwin Core
 - GMP
- Data gateways development

Mentoring Success Stories

The success of the GBIF Mentoring Programme in promoting Participant Nodes is reflected in the reports from some of the

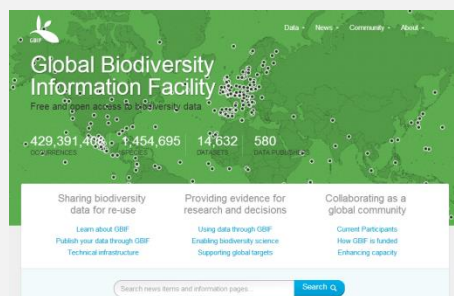

GBIF Metadata Profile: Reference Guide Version 1.0

Knowledge Management System & Data Sharing

LifeWatch & GBIF

Memorandum of Cooperation between GBIF and LifeWatch

June the 23rd, 2010

A Memorandum of Cooperation (MoC) between LifeWatch and GBIF has been signed.

This MoC provides the basis for both projects to collaborate together to develop and share critical biodiversity informatics infrastructure and information, in order to further their respective mandates. The complementarities and commonalities of both initiatives match so nicely that it is a unique opportunity for nodes to work better on making biodiversity data accessible and used for the benefit of our societies.

More information: http://www.gbif.es/ficheros/MoC_GBIF-LifeWatch.pdf

3. Objective of this Memorandum of Cooperation (MoC)

LifeWatch is an integrating infrastructure framework that can benefit from and accommodate many GBIF developments to date, including **data standards** and **protocols, supporting software, taxonomic services** and the primary biodiversity **data** that GBIF serves. GBIF will look to the LifeWatch initiative, with its intended provision of relevant infrastructure, services and tools, to further enable the mobilisation, publication, deployment and use of GBIF data in a suite of application tools.

The objective of this MoC is to formalise a framework for co-operative and collaborative work between the ongoing GBIF and new LifeWatch initiatives while recognising their respective independent yet complementary missions as summarized under article 2 above.

Disclaimer & disclosure of interests

- I am not a GBIF Official, I have no LW appointment, I talk in my personal capacities
- I have been Program Officer at GBIF Secretariat for 2 years
- I have been Chair of GBIF Nodes Comm. and GBIF executive Comm. member (2008-2012)
- I am director of the GBIF Spain National node
- I am researcher of CSIC

GBIF is going through difficulties

GBIF Annual Report 2012

Table 1 : GBIF First Financial Year, third phase, contributions received for 2012

	MOU signature date	Country		Agreed Financial Contribution 2012	Received Financial Contribution
				4,312,250	2,254,057

http://www.gbif.es/ficheros/GBIF_Financial_Report_2012.pdf

- Do we have enough biodiversity data?
- Can LW go ahead without a strong GBIF?

Relation between GBIF and LW is poorly understood, at least at country level

- Is LW taking over GBIF?
- Is GBIF made redundant by LW?
- ...

How come this could be happening?

Closing remarks

- (Food for discussion)
 - There is need for clarification for the connections and roles of LW and GBIF
 - Can LW operate without GBIF?
 - What components already exist and can put to use?
 - What new components are needed?
 - What are the optimal scales of the related components?

- > 400M data records
- > 10K datasets
- > 50 country members
- > 700K visits/yr. + Ms-Ks APIs requests/yr
- 100s of people working on it around the globe
